

# Remote Support Solutions

Vuzix keeps machines running smoothly, and saves time and resources at Clorox

## The Clorox Company

### Challenge

With travel restrictions and reduced worker assignments in place, Clorox needed a reliable method for completing mandatory plant audits, and a solution to account for decreased availability of maintenance and logistics professionals.

### Solution

#### **Worker training and equipment maintenance**

In multiple plants across Clorox, employees have been equipped with smart glasses to troubleshoot and perform equipment repairs. Remote experts are used to observe and provide moment of need support.

#### **Facility inspection**

Clorox deployed Vuzix smart glasses to perform Zero Waste and fiscal audits. The solution provides visual guidance and first-person point-of-view recordings to their external auditors without the need to fly auditors on site.

### Usage Goals

- Decrease audit times
- Comply with audit schedule
- Reduce machinery downtimes
- Support worker safety

## Proven Results

- Remote site walk-around audits performed in one-tenth of the time they took prior to adoption
- Roughly \$949 saved per person/audit
- Faster maintenance response times resulting in 20% reduction of machinery downtime
- Reduced risk of exposure for employees
